Process Modelling and Simulation in Chemical, Biochemical and Environmental Engineering

Ashok Kumar Verma

Process Modelling and Simulation in Chemical, Biochemical and Environmental Engineering Ashok Kumar Verma

The use of simulation plays a vital part in developing an integrated approach to process design. By helping save time and money before the actual trial of a concept, this practice can assist with troubleshooting, design, control, revamping, and more. **Process Modelling and Simulation in Chemical, Biochemical and Environmental Engineering** explores effective modeling and simulation approaches for solving equations. Using a systematic treatment of model development and simulation studies for chemical, biochemical, and environmental processes, this book explains the simplification of a complicated process at various levels with the help of a "model sketch."

It introduces several types of models, examines how they are developed, and provides examples from a wide range of applications. This includes the simple models based on simple laws such as Fick's law, models that consist of generalized equations such as equations of motion, discrete-event models and stochastic models (which consider at least one variable as a discrete variable), and models based on population balance.

Divided into 11 chapters, this book:

- Presents a systematic approach of model development in view of the simulation need
- Includes modeling techniques to model hydrodynamics, mass and heat transfer, and reactors for single as well as multi-phase systems
- Provides stochastic and population balance models
- Covers the application and development of artificial neural network models and hybrid ANN models
- Highlights gradients based techniques as well as statistical techniques for model validation and sensitivity analysis
- Contains examples on development of analytical, stochastic, numerical, and ANN-based models and simulation studies using them
- Illustrates modeling concepts with a wide spectrum of classical as well as recent research papers

Process Modelling and Simulation in Chemical, Biochemical and Environmental Engineering includes recent trends in modeling and simulation, e.g. artificial neural network (ANN)-based models, and hybrid models. It contains a chapter on flowsheeting and batch processes using commercial/open source software for simulation.

From reader reviews:

Catherine Rubio:

The book Process Modelling and Simulation in Chemical, Biochemical and Environmental Engineering will bring you to the new experience of reading a book. The author style to explain the idea is very unique. When you try to find new book to read, this book very suitable to you. The book Process Modelling and Simulation in Chemical, Biochemical and Environmental Engineering is much recommended to you to see. You can also get the e-book from the official web site, so you can easier to read the book.

Guadalupe Baum:

Reading a e-book tends to be new life style within this era globalization. With studying you can get a lot of information that could give you benefit in your life. Using book everyone in this world can easily share their idea. Publications can also inspire a lot of people. Plenty of author can inspire all their reader with their story or their experience. Not only the storyplot that share in the publications. But also they write about the ability about something that you need example. How to get the good score toefl, or how to teach your children, there are many kinds of book which exist now. The authors these days always try to improve their skill in writing, they also doing some analysis before they write for their book. One of them is this Process Modelling and Simulation in Chemical, Biochemical and Environmental Engineering.

Theodore Huff:

Spent a free time and energy to be fun activity to complete! A lot of people spent their spare time with their family, or all their friends. Usually they undertaking activity like watching television, going to beach, or picnic inside the park. They actually doing same every week. Do you feel it? Do you need to something different to fill your current free time/ holiday? May be reading a book is usually option to fill your totally free time/ holiday. The first thing that you'll ask may be what kinds of guide that you should read. If you want to attempt look for book, may be the guide untitled Process Modelling and Simulation in Chemical, Biochemical and Environmental Engineering can be good book to read. May be it can be best activity to you.

Denise Zimmerman:

A lot of people always spent their very own free time to vacation or perhaps go to the outside with them family members or their friend. Were you aware? Many a lot of people spent many people free time just watching TV, or perhaps playing video games all day long. In order to try to find a new activity that is look different you can read some sort of book. It is really fun in your case. If you enjoy the book that you simply read you can spent the whole day to reading a publication. The book Process Modelling and Simulation in Chemical, Biochemical and Environmental Engineering it is rather good to read. There are a lot of individuals who recommended this book. They were enjoying reading this book. In case you did not have enough space bringing this book you can buy often the e-book. You can m0ore simply to read this book from the smart phone. The price is not very costly but this book offers high quality.
